# CAD objectives

- + Standards based interoperable solution for accreditations and certifications
- + Regulatory compliance (GDPR, eIDAS2)
- + Free software solution for the universities
- + Integrated with university IT systems
- + Foster verifiable credential use in the public and private sectors

# Digital identity challenges

# Self Sovereign identity (SSI)

Credential producer

Entities that generate credentials about persons

Person / Citizen

Persons that manage and voluntarily share credentials from their "identity wallet"

Service provider / Credential receiver

Any entity that can ask for and process shared data with previous person consent

# Why a DLT (a.k.a. *blockchain*)

Transparency

Immutability

Decentralisation

# the TIR

## Trusted Issuer Registry

The Trusted Issuers Registry (TIR) is a generic decentralised registry that maintains information about trusted issuers, including public data, accreditations and other relevant details. This information is stored in the smart contract as Attribute Envelopes (similar to Verifiable Credentials), which can be issued by Trusted Issuers or self-issued. Validation of generic Envelopes (like Verifiable Credentials) occurs outside the EBSI Platform. Issuers can define proxies used during credential verification to check if credentials are still valid or have been revoked. The verification flow is detailed in the Credential Status Framework.

<https://hub.ebsi.eu/vc-framework/credential-status-framework>
